Wasting time correcting exams

Executive Summary :

The problem of correcting exams takes a lot of time and effort, and there are also mistakes in correction , to solve these problems , we will implement an electronic correction system

Deliverables :

1.Required Information :

We collect data that will explain the examination .

2.Design :

We follow the college system to know what the examination system is.

3.development/coding :

-Design the backend, which should contain:

1)Server

2)Data base

-Design the frontend.

4.Integration :

Combine the previous steps and test them to ensure that they work efficiently

.

•Project Resources :

1.Good internet connection.

2.Server.

3.Trainers who train students on the online examination system.

Project scope statement :

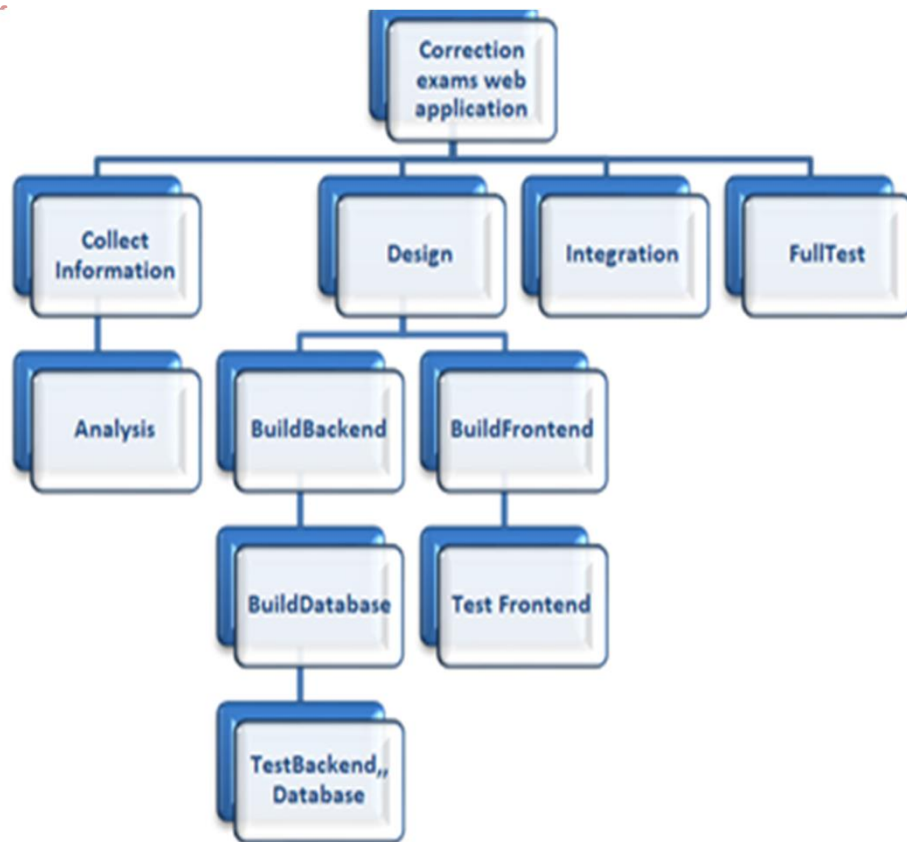

Objectives : *Objectives are to apply the electronic correction system to reduce the time spent on correction and reduce the stress of students waiting for results.*

Project exclusions : *This system will be applied in the Faculty of Computers and Information . The students to whom this system is applied are the students who are tested in the laboratory building only*

•Budget : *The project is fully covered by 220,000, divided into 105,000 allocated for the entire program and 115,000 allocated to the trainers responsible for training students on this new system*
